

# Overall Process Optimization by Integration

**Purchase**

The sales force can easily create individual offers per PDF, MS Word or Visio on the basis of templates. At the same time, all data is thus available to the production and the planning manager as well.

**Co-workers**

For customers it is important to be informed about the production progress at all times, ensuring that possible problems can be recognized and be eliminated as early as possible and that missing information can be submitted as fast as possible.

**Administration**

Clear, aggregated and detailed views provide the necessary overview to keep the management informed comprehensively about all procedures and their states at any time. On this basis individual evaluations in MS Excel can be further processed.

**Sales**

**Sales**

With the help of predefined MS Infopath forms for suppliers, standardized and comparable offers are available for the purchasing department directly in the system - and after the order process automatically for the production department as well.

**Workflow Server**

**Purchase**

**Scheduling**

The workflow engine coordinates, supports, and supervises all jobs in production, ensuring that the planning manager only needs to worry about the detailed planning and the conflict resolution for an efficient usage of resources. Thus, no detail will be forgotten and no deadline will be missed.

**Co-workers**

In order to improve the production process regarding quality and turn-around time, suppliers can be involved into the process directly or by E-mail. Relevant data is thus at the full disposal of all parties involved, automatically and promptly.

**Co-workers, Freelancer, Machines**
