

# CEITON Web Workflow PPS

*Design and run your perfect business process!*

## **About CEITON's Web Workflow PPS – a real Workflow management system\***

CEITON's Web Workflow PPS is an advanced 3D, web-based Workflow management system for production scheduling and control. It can be customized for any workflow in broadcast, post and pre-mastering production in order to streamline entire business processes, and to save time and money too. A unique 3D visualization engine provides a dynamic overview of any workflow – from a simple service procedure to the most complex production processes – unifying quotations, order production, scheduling, time and activity recording, contacts, QA, billing and content archiving in one powerful, completely generic system. It will even print labels of managed assets and connects easily to any other software or machine. Web Workflow PPS is the easiest way to build, visualize, plan, control, manage and bill all of today's media production processes.

### **Web Workflow PPS Overview:**

- 3-tier architecture (GUI, APP, DB)
- scalable from a single workstation up to clustered distributed servers
- completely web-based (WinLIKE)
- runs on MS Windows, Unix, Apple OSX
- multi-tenancy / multi-client
- multi-lingual (Unicode)
- exchangeable skins (CSS)

### **Main Modules of Web Workflow PPS:**

- Workflow Engine – for defining Workflows, work order forms, QC sheets etc.
- Document Management – for managing files based on revision (Versioning)
- Interface Module – for defining custom interfaces or gateways to other systems (EAI)
- Reporting Module – for defining plans, analysis, labels, quotes and any printouts
- Scheduling – for planning productions, departments and any kind of resources
- Order Administration – for quotations, invoicing, settlement etc.
- Media Archives – for managing media archives and meta data
