

Company Profile

Founded in 2000, and headquartered in Leipzig, Germany, CEITON develops web-based technologies and integrates these as valuable management solutions for customers in the entertainment, telecommunications and defense industries. CEITON also delivers independent IT and process-based consulting, planning and evaluation to give decision-makers the confidence they need to implement bold technological and administrative changes within their organizations.

CEITON's approach to product R&D is inspired by the successful Japanese principles of workplace organization and standardization. The word "Seiton" means to place things in such a way that they can be easily reached whenever they are needed. Being well organized improves work efficiency, helps to motivate people and improves productivity. These values are fundamental to CEITON's major products Web Workflow PPS and WinLIKE.

CEITON Web Workflow PPS - <http://www.workflow.tv>

CEITON's Web Workflow PPS is the leading web-based, 3D workflow management system and is used for production planning and control in modern, process-orientated companies. The system improves the flow and structure of production processes, enabling companies to produce faster and more economically, improve quality, to react more to changes, or simply to be better informed. The CEITON Web Workflow PPS system is unparalleled in that it maps simple service procedures, as well as complex and dynamic production processes, using an interactive 3D visualization engine.

CEITON WinLIKE - <http://www.winlike.net>

Everyone uses windows to get work done on their computers, but CEITON's WinLIKE is the first professional Window manager that provides windows for the Internet as well. Using WinLIKE web applications and web pages can be constructed with windows, making these applications simpler to use, as well as more powerful and faster. WinLIKE operates without plug-ins in Internet Explorer 5.5, Netscape Navigator 6.1, plus related and/or newer browsers. WinLIKE is free for personal use.
